Early adulthood generally refers to the period between ages 18 to 25, and according to theorists such as Erik Erikson, is a stage where development is mainly focused on maintaining relationships. Middle childhood ages 6–
OpenLearnworkswithotherorganisationsbyprovidingfreecoursesandresc
Play is a major activity for ages 3–5. Other accounts, such as that of Lev Vygotskyhave suggested that development does not progress through stages, but rather that the developmental process that begins at birth and continues until death is too complex for such structure and finality. A child can be hindered in its natural tendency to form attachments. Psychologists have attempted to better understand these factors by using m
study of the relationships that infants usually between 12 months and 24 months have with parents has been much influenced by a standardised procedure known as the strange

situation. Having more than one of these figures contributes to a higher likelihood of positive child outcomes.
