Because of the numerous ballast designs and styles on the market, and the potential saturation problem, a simple derating factor cannot be developed and it is recommended that a vendor supplying 50 Hz-rated ballasts be located. It is important that the standard receptacle style for a given voltage be used to avoid confusing the user and creating a potential safety hazard. B-1 TM Table S- 1.

Otherwise, the mechanical coupling used between the motor and driven equipment- Core saturation occurs when all of the magnetic domains of the iron align, resulting in a condition in which no further increase in flux density over that of air can be obtained. Three-phase and industrial loads may have other voltages. Additionally, each section describes why the equipment is sensitive to voltage starters are sensitive to frequency as well, but indirectly so.
