Also very helpful at the end of the day to clean up any messes created during excavation. Excavation may be in soft sand, hard stony soil or even underwater.

Soil removed from the site is transported away, as the excavation proceeds so

Archaeologists find this tool particularly useful when they have to deal with square holes. It is a simple tool used in taking excavated soil away from archaeological sites in a neat way. Uses of Radioactive Isotopes.

Dirt is loaded onto the screen. Soil is shoveled either into buckets usually 5-gallon size and then carried to the screen, or is shoveled directly into the screen. A small pickaxe is sometimes used to loosen compacted soil for easier removal.
