Inside a Baseball-Size Hailstorm

5 hours ago North West - New visitors arriving at Sun City Resort are being advised to return home after a "freak hail storm" hit the resort, damaging.

Hail - Wikipedia

Hail is a form of solid precipitation. It is distinct from ice pellets (American English "sleet"), Any thunderstorm which produces hail that reaches the ground is known as a hailstorm. Hail has a diameter of 5 millimetres (in) or more.

Guests share their experiences of hail storm damage at Sun City. Part of the nature series.

But sometimes, the unexpected happens, and with cameras rolling on this day

Like other precipitation in cumulonimbus clouds, hail begins as water droplets. This means the hailstone is made of thick and translucent layers, alternating with layers that are thin, white and opaque.

Unlike other forms of water ice such as graupel which is made of rime and ice pellets
